

Drawings & Specifications

## **NORDIEN-SYSTEM**

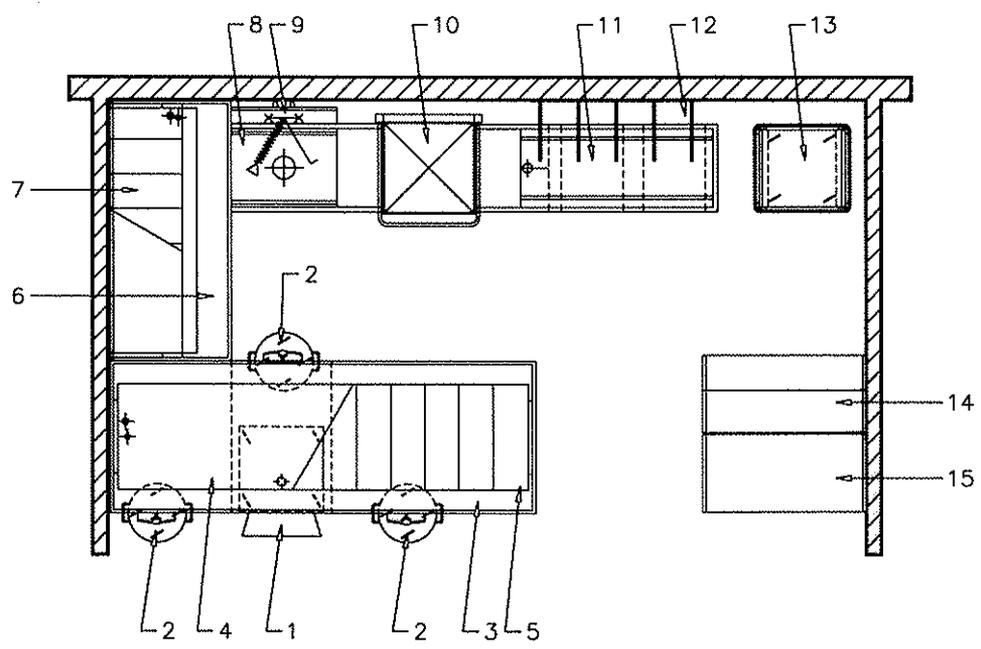

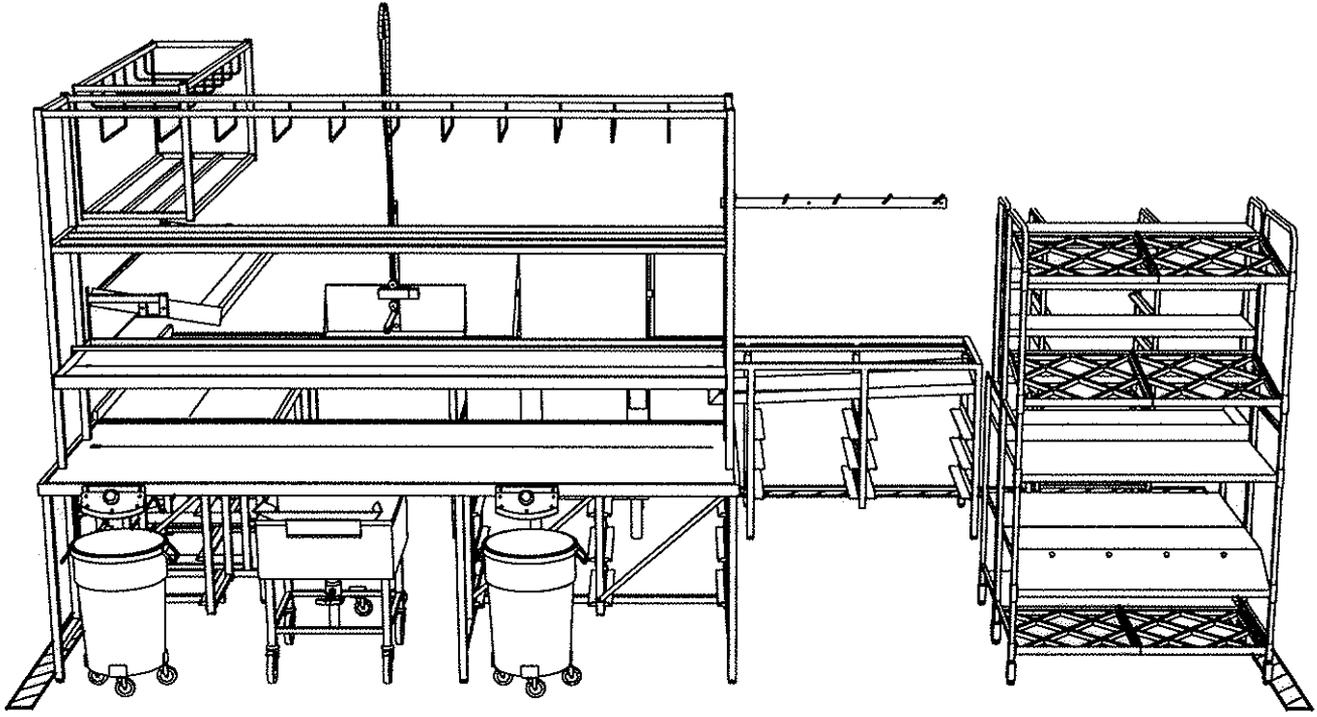

### **System Drawings**

Please find enclosed ten drawings for Dishwashing Areas. The drawings show NORDIEN-SYSTEM in various types of restaurants. Every Dishwashing Area and restaurant is unique and has its own requirements, which have to be considered. We would however like to point out the importance of seeing the entire handling of glass and crockery as a complete and related function.

Accumulation of the goods is mentioned several times in our description, which is a way to use the staff more evenly over the day, as well as a way to plan the actual dishwashing to gain an efficient and economic handling system and to get the best result.

To make it possible for the Steward to work quickly and efficiently without unnecessary breakages, he needs an efficient tool - the NORDIEN-SYSTEM.

# **NORDIEN-SYSTEM**

Restaurant 100 - 300 seats

*Table service - pre-sorted goods - accumulated dishwashing*

The serving staff place the dirty goods on the sorting bench, which is complete with a sorting shelf, a rack for empty baskets and guide rail sections for accumulation. The cutlery goes directly into the cutlery basket in the cutlery trolley, leftovers are scraped off the plates with the scraper and the plates are stacked on the left side of the bench. Glasses and cups are sorted directly into baskets on the sorting shelf.

The baskets are tilted towards the serving staff and when the basket is full, it is tilted over towards the dishwashing room. The Steward takes the full basket, puts it in the guide rail sections under the bench for accumulation, and replaces it with a clean empty one. Other dirty items, like pots, bowls and special types of glasses are placed on the right side of the bench. The special types of glasses are sorted into baskets on the sorting shelf (pos. 7) which is also used for sorting from trolleys, for instance from room-service, banquet or breakfast. The Steward stacks and stores the plates on the sorting bench. The piles of plates can also be soaked in the basin line. The goods are sorted and accumulated during the intensive period and the dishwashing takes place later. The full glass baskets are then washed. Plates are placed into dishwashing baskets and washed.

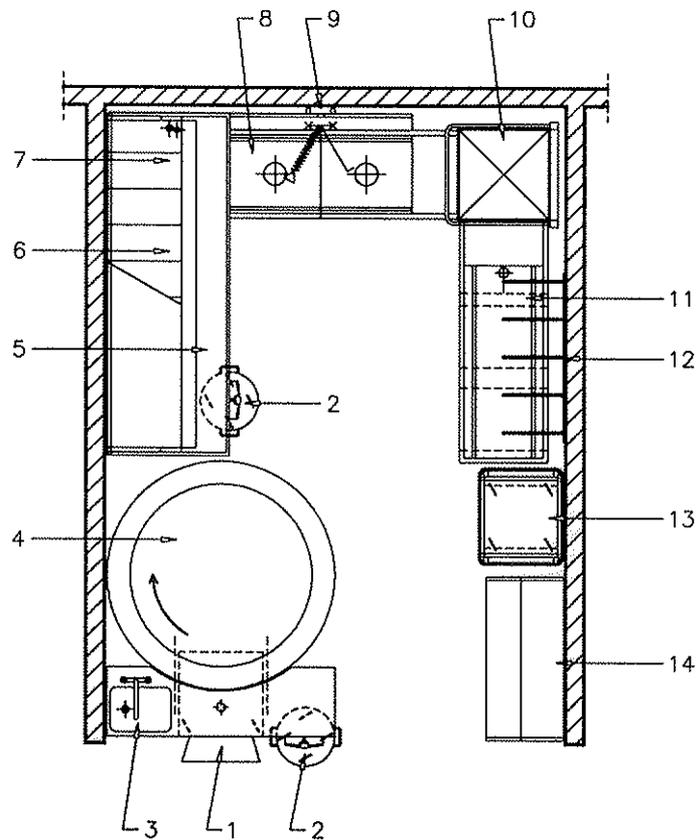

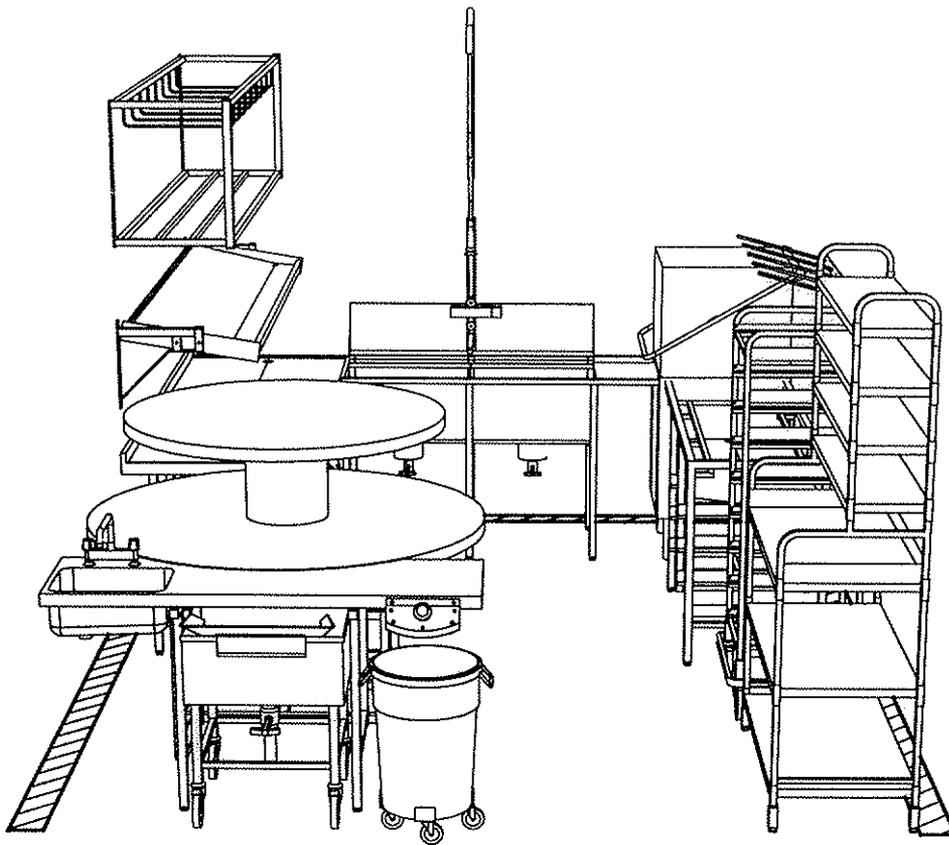

When the cutlery is washed the second time in the dishwashing tray for cutlery, the Steward empties the tray onto the cutlery sorting rack with the handles towards him. In that way, he can sort the cutlery into cutlery boxes only touching the handles. The Steward places the clean goods on trolleys and transports them to the storage areas.

The equipment is situated to reduce the working area and to shorten the transportation - still there is a lot of room to place and sort the goods and to store empty baskets etc.

# Ⓢ NORDIEN-SYSTEM

Restaurant 100-400 seats

*Tableservice - pre-sorted goods - accumulated dishwashing*

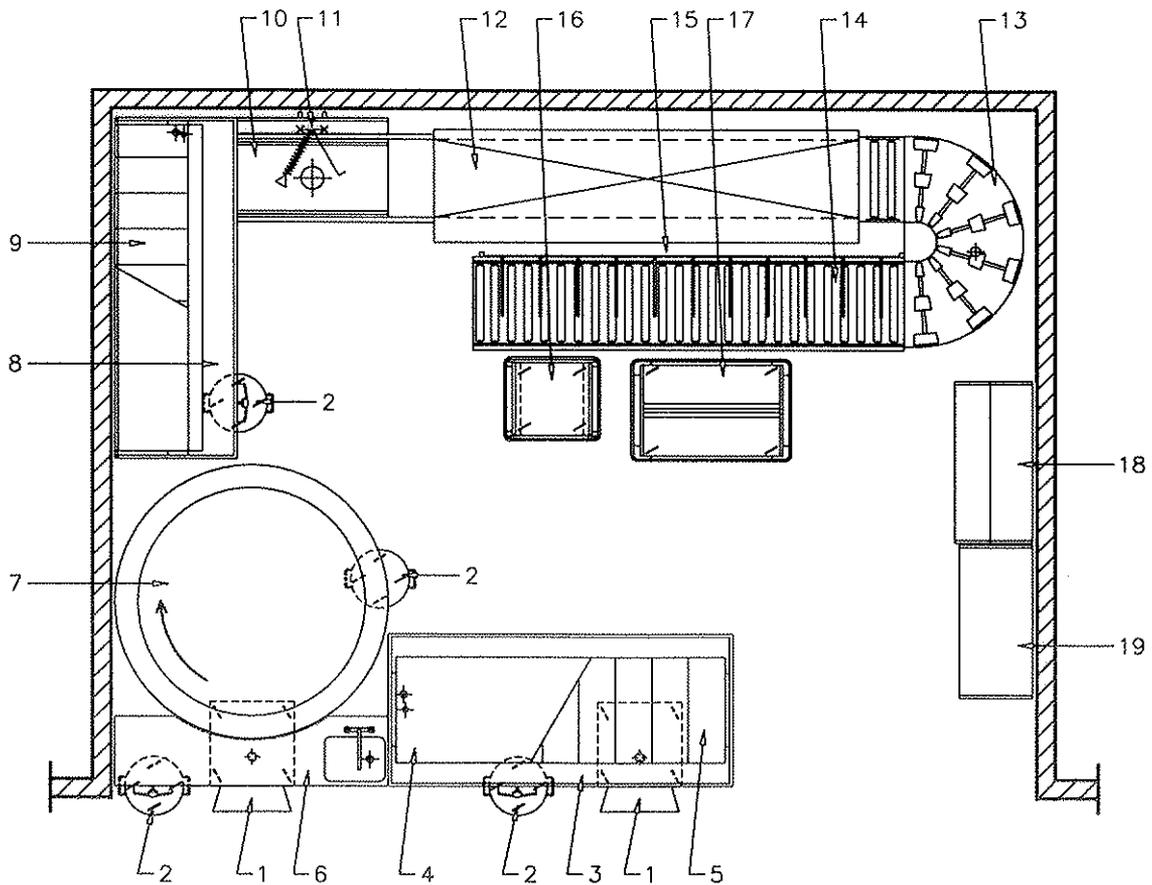

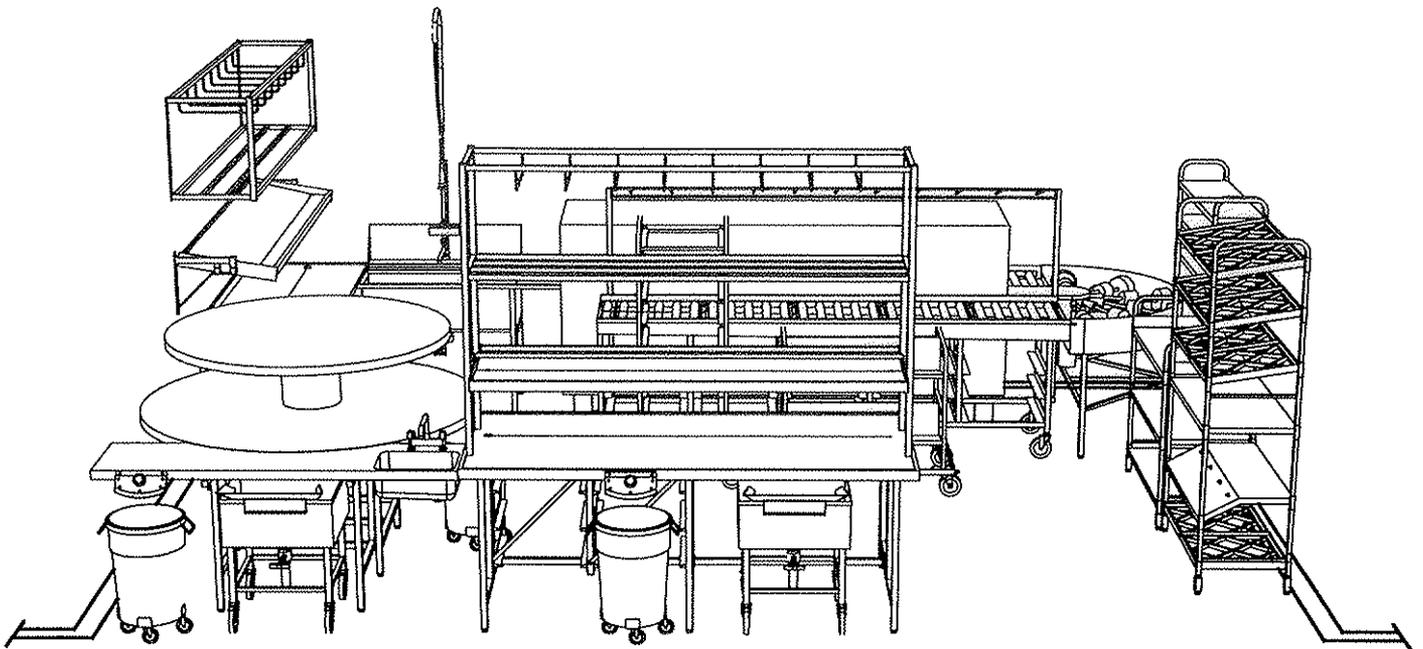

The Serving staff place the dirty goods on the two-level carousel; glasses and cups on the upper level, plates and other crockery on the lower level. The cutlery goes directly into the cutlery basket in the cutlery trolley. Leftovers are scraped off the plates with a scraper and stacked on the lower level of the carousel. Ice and slops are poured into the sink. The Steward stands by the sorting bench and uses the sorting shelf to sort glasses and cups from the carousel into baskets. When the baskets are full, they are placed on the guide rail sections under the bench. Plates and other crockery are stacked on the sorting bench or soaked in the basin line. In this way, the goods can be accumulated during the busy working hours such as lunchtime. The big capacity of the carousel makes it possible to work the dishwashing area more evenly regardless of the ups and downs in the restaurant. The goods are sorted and accumulated during the intensive period and the dishwashing takes place later. The full glass baskets are then washed. Plates are placed into dishwashing baskets and washed. The Steward places than the clean goods on trolleys and transports them to the storage areas.

The big capacity of the carousel makes it possible to work in a very small area - even for a restaurant with a large variety of glasses and crockery. The equipment is situated to reduce the working area and to shorten the transportation. Still there is a lot room to place and sort the goods and to store empty baskets and plate cassettes.

# Ⓢ NORDIEN-SYSTEM

Restaurant 300 - 500 seats

*Table service – pre-sorted goods - accumulated dishwashing*

The serving staff place the goods as follows:

The cutlery goes directly into cutlery baskets in the cutlery trolley. Cups and the most frequent glasses are pre-sorted directly into baskets on the sorting shelf. The rest of the glasses are put on the upper level of the carousel. Leftovers are scraped off the plates with the scraper and the plates are stacked on the lower level of the carousel. When the baskets with pre-sorted glasses are full, they are stored on the guide rail sections under the bench - or if necessary, on a trolley, to be washed later on. The full baskets are replaced with empty ones from the rack above the shelf. The glasses on the upper level of the carousel are sorted directly into baskets on the sorting shelf (pos. 9) and when they are full they are stored on the guide rail sections under the bench.

The plates are stacked and stored on the sorting bench (pos. 8) or soaked in the basin line. In this way, the goods are being accumulated during the intensive periods, such as lunchtime. When the intensive period is over, the full glass baskets are washed. Plates are placed into dishwashing baskets, pre-rinsed and washed.

When the cutlery is washed the second time in the dishwashing tray for cutlery, the Steward empties the tray onto the cutlery sorting rack with the handles towards him - in this way he can sort all the cutlery into cutlery boxes only touching the handles. The clean cutlery can then be stored on the cutlery rack or transported for storing elsewhere. The Steward places the clean goods on trolleys and transports them to the storage areas.

This dishwashing area can be handled by one man in a big restaurant with a large variety of glasses and crockery. The 180° turntable makes it possible to use the area in front of the machine and it also reduces unnecessary movement for the Steward. He can load and empty the machine from the same place.

Self Service Restaurant 200 - 400 seats

*Tray service - accumulated dishwashing*

The guests or the staff leaves the dirty goods on trays in a tray trolley, which later on is taken to the dishwashing room. The Steward scrapes the leftovers off the plates with the scraper and stacks them on the bench. Glasses and cups are sorted into dishwashing baskets on the sorting shelf. When the baskets are full, they are put on the guide rail sections under the bench for accumulation. The cutlery goes directly into cutlery baskets in the cutlery trolley and the trays are stacked on the bench. In this way, the goods can be accumulated during the intensive period and washed later on. When the intensive period is over, the full glass baskets are washed, plates are placed into dishwashing baskets, pre-rinsed and washed.

The Steward then places the clean goods on the trolleys and transports them to the storage areas.

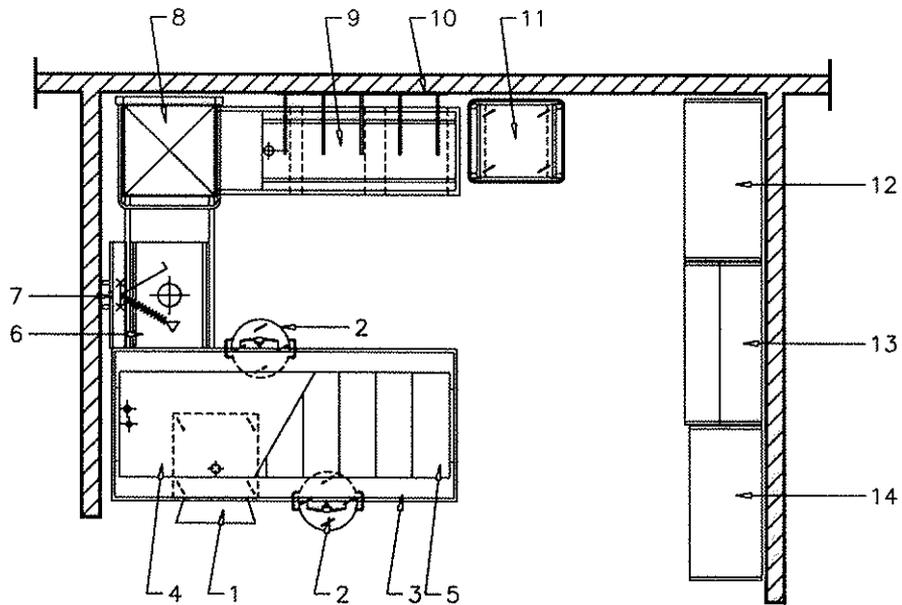

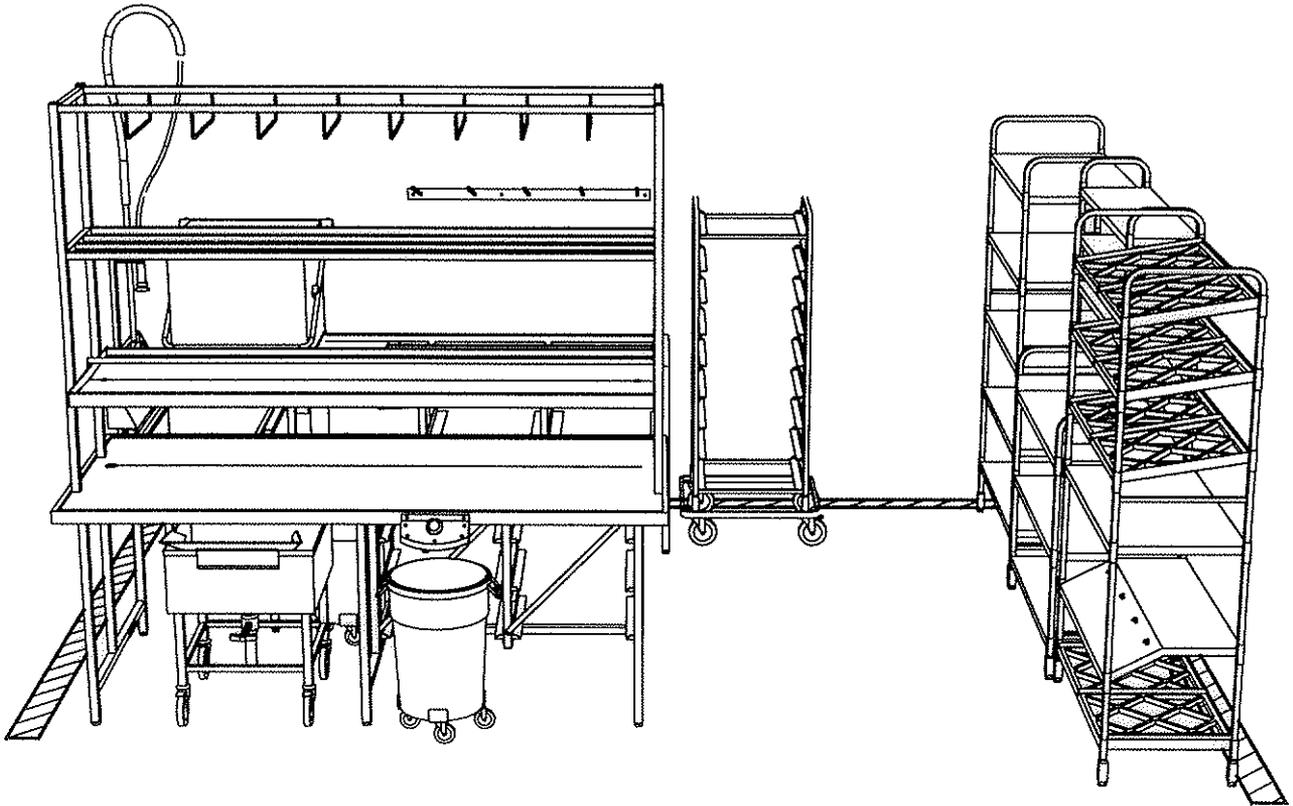

When the cutlery has been washed the second time in the dishwashing tray for cutlery, the Steward empties the tray onto the cutlery sorting rack with the handles towards him. In that way, he can sort the cutlery into cutlery boxes only touching the handles.

This dishwashing area can, with a minimum of staff, handle the dishwashing for a big lunch restaurant or staff canteen. By accumulating the dirty goods, during the intensive periods, the staff can balance the work more evenly during the working hours. The 180° turntable makes it possible to use the area in front of the machine and it also reduces unnecessary movement for the Steward - he can load and empty the machine from the same place.

# Ⓜ NORDIEN-SYSTEM

Restaurant 100 - 300 seats

*Table service - pre-sorted goods - continuous dishwashing*

The serving staff place the dirty goods on the sorting bench, which is provided with a sorting shelf and a rack for empty baskets. The cutlery goes directly into cutlery baskets in the cutlery trolley. Leftovers are scraped off the plates with the scraper and the plates are stacked on the bench. Glasses and cups are pre-sorted into dishwashing baskets on the sorting shelf. The baskets are tilted towards the serving staff and when the baskets are full, the serving staff tilts them towards the dishwashing area. The Steward takes the full glass baskets and puts them through the dishwashing machine, he replaces the full basket with an empty one. The Steward places the plates into plate baskets, pre-rinses them and puts them through the dishwashing machine.

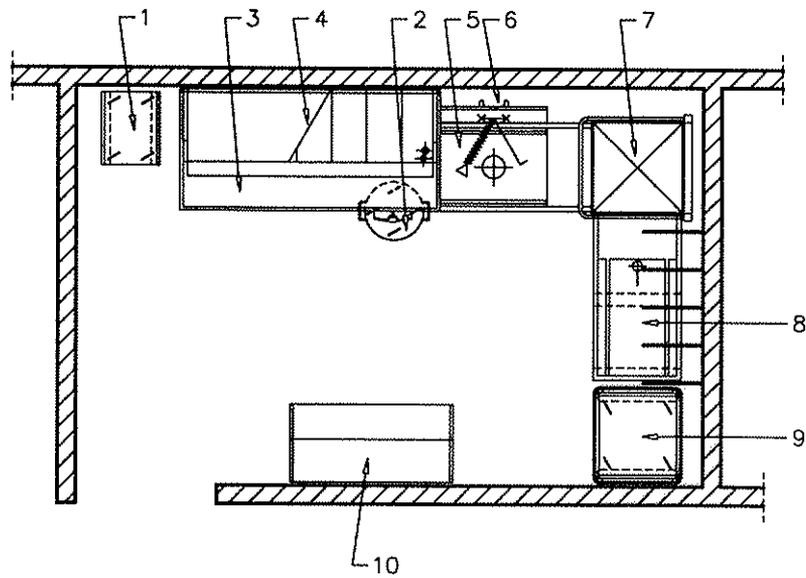

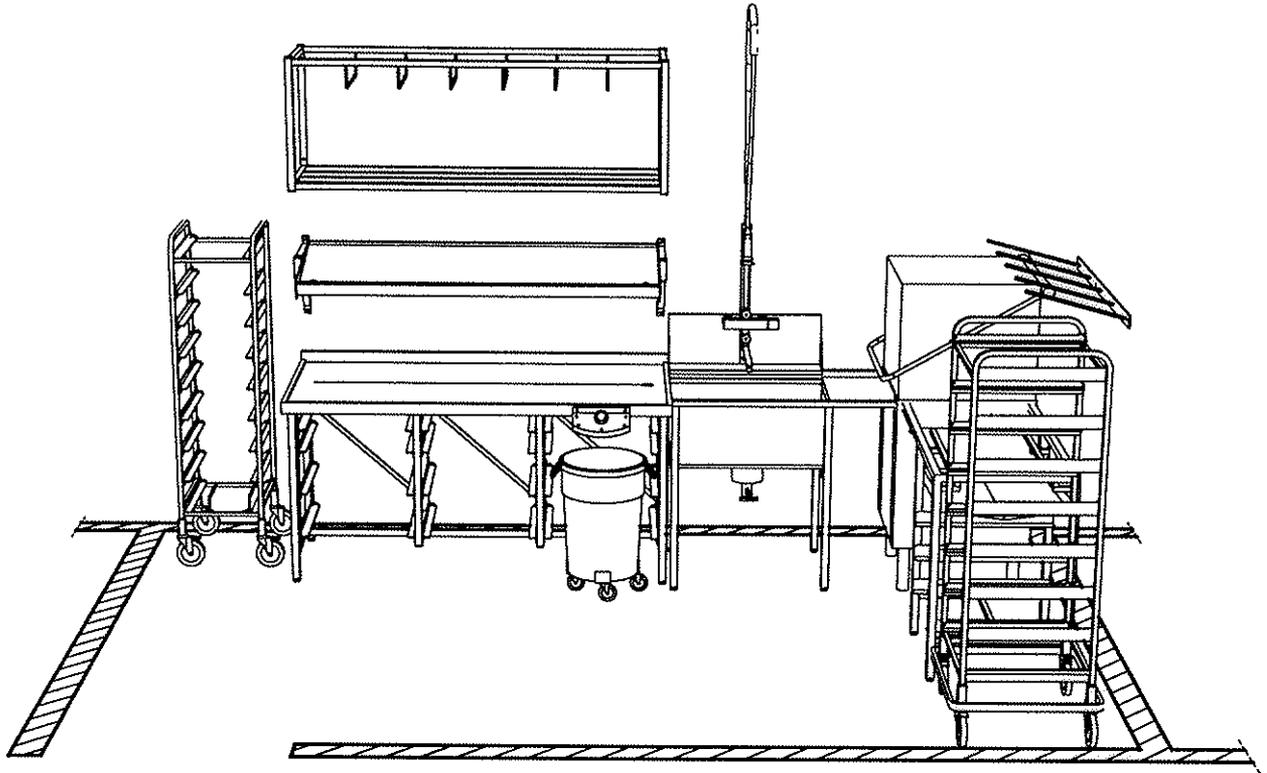

When the cutlery is washed the second time in the dishwashing tray for cutlery, the Steward empties the tray on the cutlery sorting rack with the handles towards him. In that way, he can sort the cutlery into cutlery boxes only touching the handles. The clean goods are placed on trolleys and transported to the storage areas.

This fairly small dishwashing area still provides enough dumping area for dirty goods on the dumping bench. This enables the serving staff to quickly return to their guests. The Steward gets good help from the serving staff as they pre-sort the glasses and cups into baskets pile the plates and put the cutlery directly into cutlery baskets.

Self-service Restaurant 50 - 200 seats

*Tray service - continuous dishwashing*

The dirty goods are placed on trays in tray trolleys, which are later transported into the dishwashing area. The Steward sorts the plates, cutlery and trays direct into baskets on the bench. Glasses and cups are sorted into baskets on the sorting shelf. When a basket is full, it is pre-rinsed and put into the dishwashing machine.

When the cutlery has been washed the second time in the dishwashing tray for cutlery, the Steward empties the tray on the cutlery sorting rack with the handles towards him. In that way, he can sort all cutleries into cutlery boxes, only touching the handles. The clean cutlery can then be stored on the sorting rack or transported together with other clean goods on trolleys to the storage area.

This small dishwashing area has got all the functions required for efficiently taking care of the dirty goods from the self-service restaurant as well as having space for trolleys.

Table Service 200 - 500 seats

*Table service -- pre-sorted goods -- accumulated dishwashing*

The serving staff place the dirty goods on the delivery bench, which is complete with a sorting shelf, a rack for empty baskets and guide rail sections for accumulation. The cutlery goes directly in the cutlery basket in the cutlery trolley. Leftovers are scraped off the plates with the scraper and the plates are stacked on the right side of the bench. Glasses and cups are sorted directly into baskets on the sorting shelf. The baskets are tilted towards the serving staff and when the basket is full, it is tilted over towards the dishwashing area. The Steward takes the full basket and puts it on the guide rail sections under the bench for accumulation and replaces the full basket with an empty one. Other dirty items like pots, bowls and special types of glasses are placed on the left side of the bench.

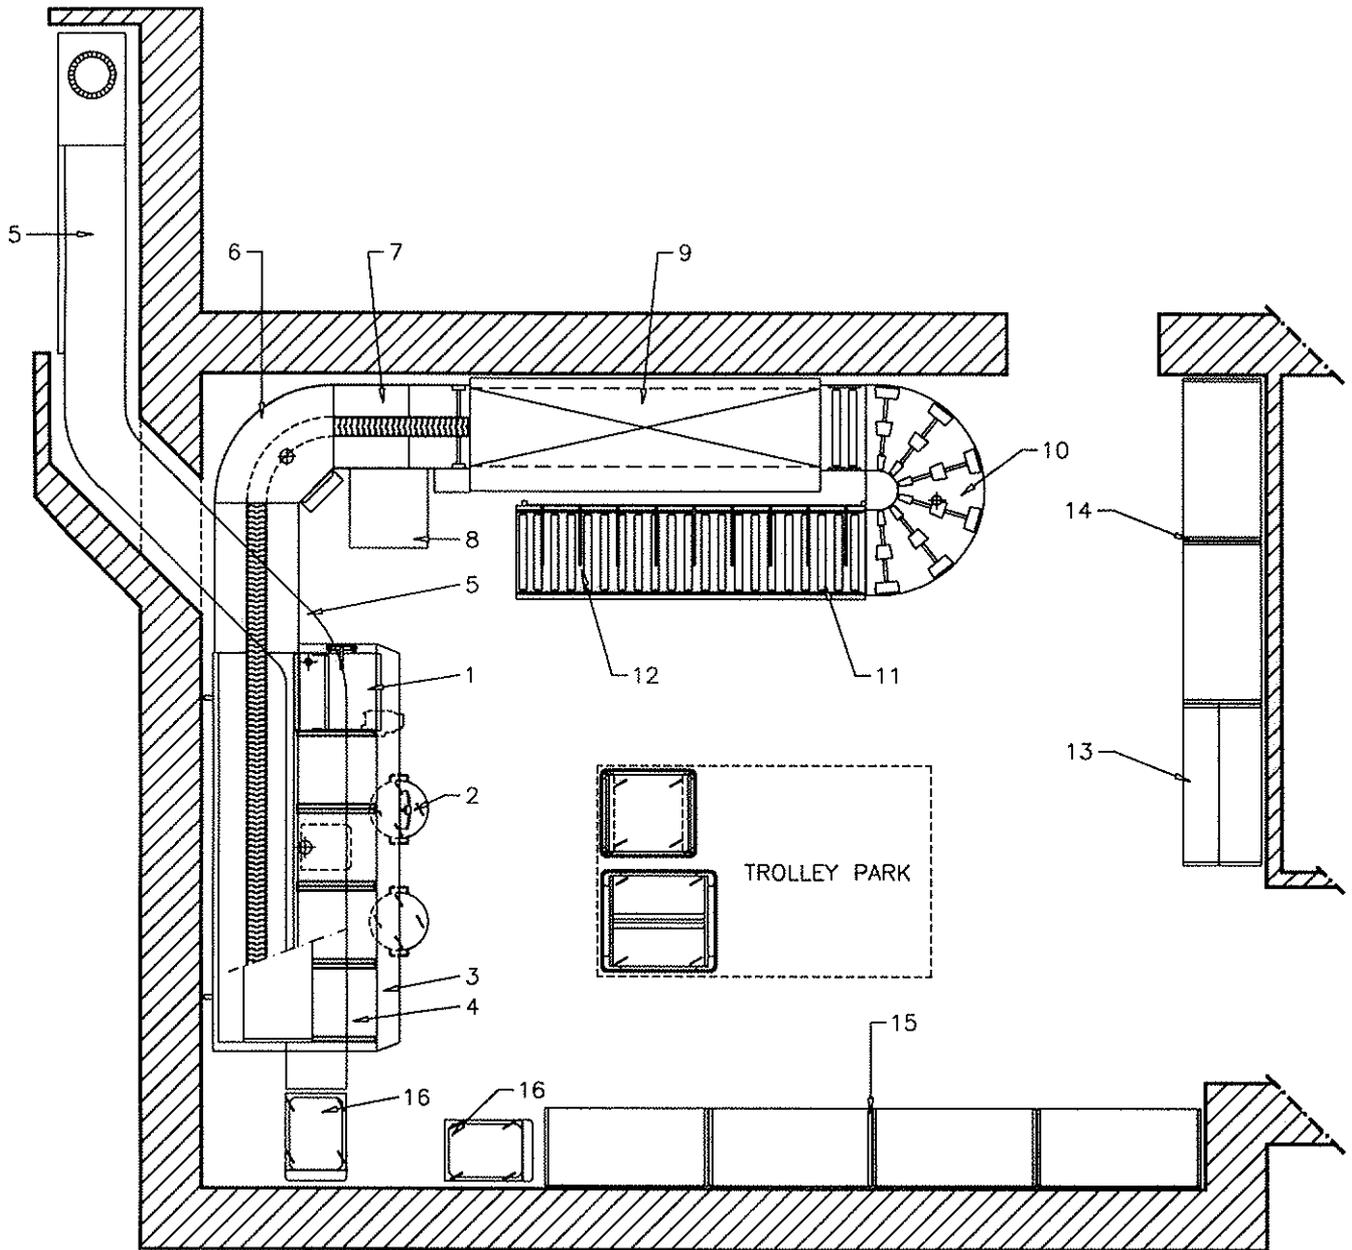

The Steward piles and stores the plates on the sorting bench (pos. 6) The piles could also be soaked in the basin line. The goods are sorted and accumulated during the intensive period and the dishwashing takes place later. The full glass baskets are then washed, plates are placed into plate baskets, pre-rinsed and washed, etc. The Steward places the clean goods onto trolleys to be transported to the storage areas.

This dishwashing lay-out gives the serving staff a lot of space to leave the dirty goods and it also gives a good sorting capacity on the separate sorting bench. The double basin line could be used for soaking and pre-washing. It could also be used for taking care of the pot wash. This layout is also suitable for banquets as it gives a lot of space for trolleys.

## **NORDIEN-SYSTEM**

### Restaurant 300 - 500 seats

#### *Tray service - continuous dishwashing*

The guests place their trays on the tray conveyor. The dry garbage is thrown in the waste ring at the beginning of the tray conveyor. The trays are then transported on the tray conveyor out to the dishwashing area. In the dishwashing room the cutlery is put directly in a cutlery basket in the cutlery soak unit. The leftovers are scraped off the plates with the scraper and the plates are then stacked in plate baskets. Glasses and cups are sorted into dishwashing baskets on the sorting table. The empty trays are automatically stacked in a tray dispenser trolley at the end of the tray conveyor.

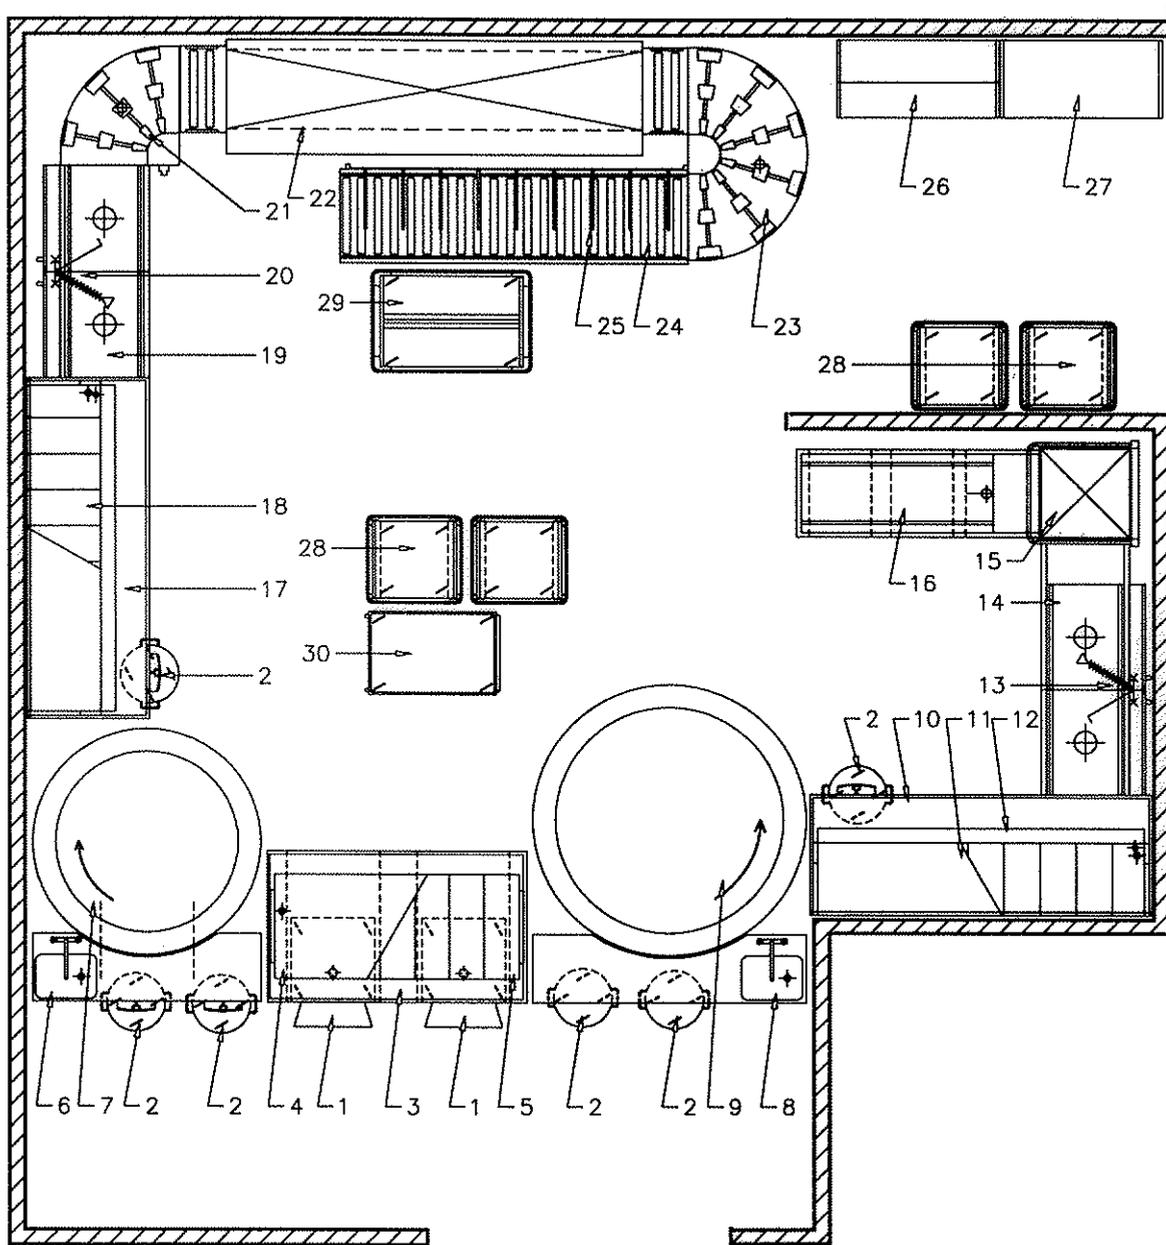

When the dishwashing baskets are full, they are pushed onto the basket conveyor. The dishwashing baskets automatically move through the automatic pre-rinse tunnel in the curve, where they are pre-rinsed, and then go into the dishwashing machine to be washed. The trays are taken from the tray dispenser trolleys and placed into tray baskets on the tray loading table. When a tray basket is full, it is pushed onto the basket conveyor to be transported into the dishwashing machine.

The clean goods are placed on trolleys and then transported to the storage and restaurant areas.

Restaurant with up to 1000 seats

*Table service – continuous/accumulated dishwashing - separate glass washing*

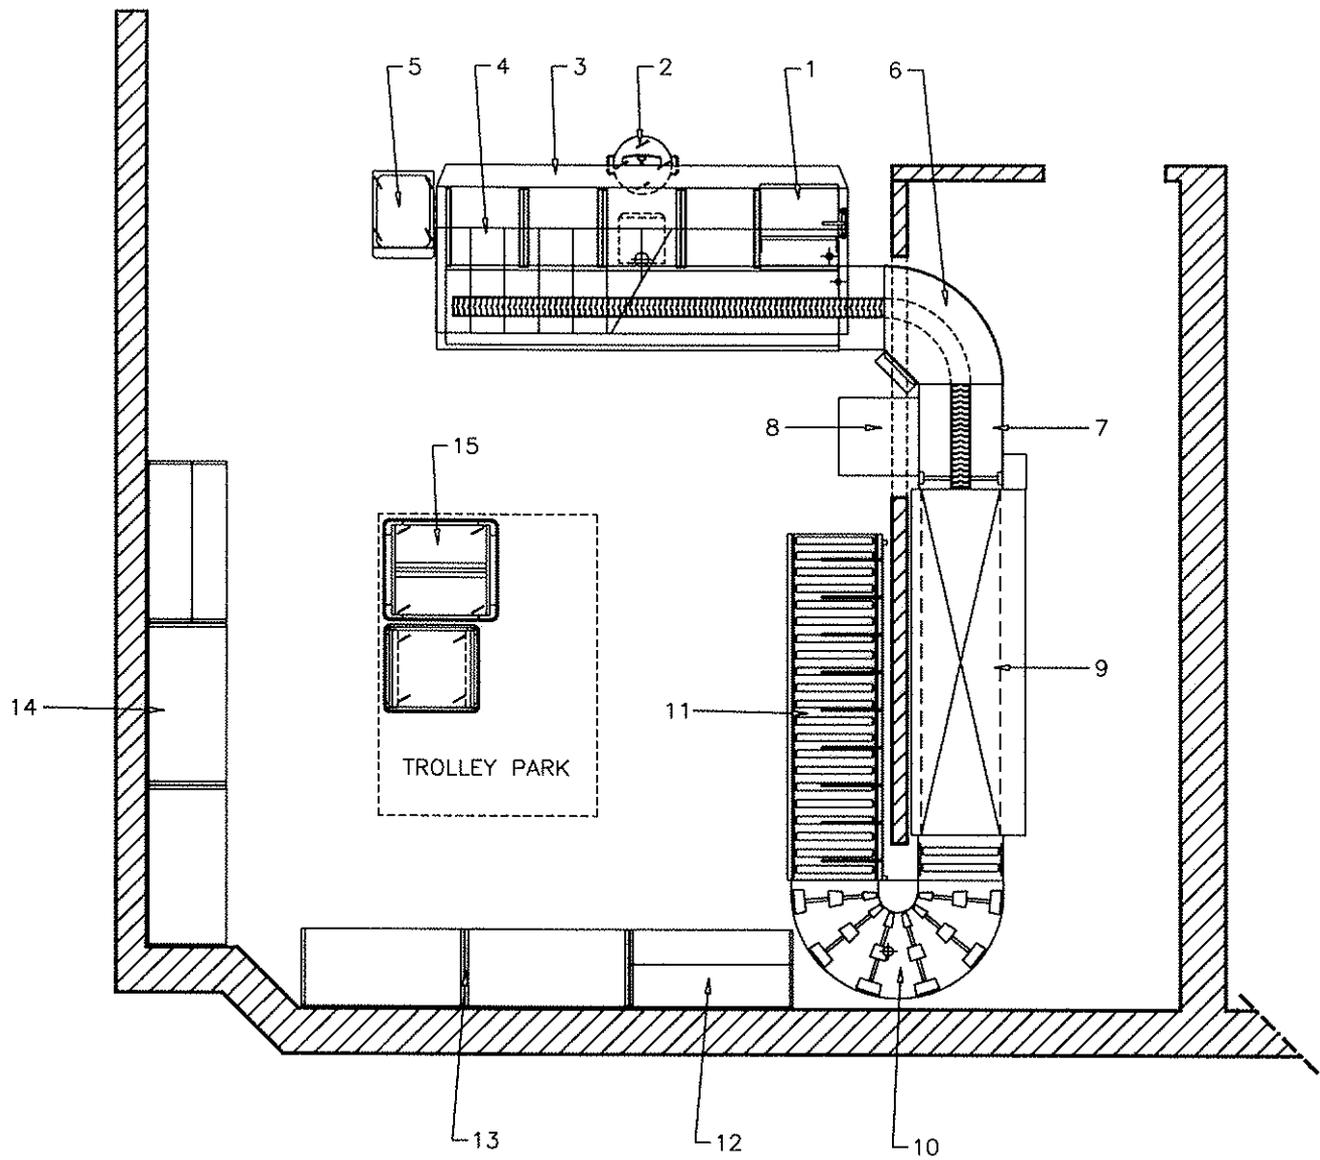

In this specific dishwashing area, the water quality demands a separate glass washing machine. The serving staff put the cutlery directly into cutlery baskets in the cutlery trolleys. Leftovers are scraped off the plates with the scrapers and the plates, as well as other crockery, are stacked on the upper and lower level of the left carousel. The most common glasses and cups are pre-sorted directly into baskets on the dumping bench and the sorting shelf (pos. 3 + 4). Other glasses are placed on the carousel to the right.

The plates are piled on the sorting bench (pos. 17) and then placed in dishwashing baskets, pre-rinsed and washed. Glasses are sorted into dishwashing baskets on the sorting bench (pos. 10) and sorting shelf (pos. 12) and washed when the baskets are full. The clean goods are placed on trolleys and transported to the storage areas.

### Restaurant 150 - 350 seats

#### *À la Carte service – continuous dishwashing*

The staff place the dirty goods directly in baskets on the sorting table. The cutlery is put directly in a cutlery basket at the cutlery soak unit. The leftovers are scraped off the plates with the scraper and the plates are then stacked in plate baskets. Glasses and cups are sorted into dishwashing baskets.

When the dishwashing baskets are full, they are pushed onto the basket conveyor. The full dishwashing baskets automatically move through the automatic pre-rinse unit to be washed in the dishwashing machine. An empty basket from the shelf for empty baskets replaces the full one. Trays are placed in tray baskets on the tray loading table. When the tray basket is full, it is pushed onto the basket conveyor and transported into the dishwashing machine.

The clean goods are placed on trolleys and then transported to the restaurant area, or placed directly in storage racks in the dishwashing area.
